DATA ABOUT FASTNESS PROPERTIES

Penetration

is based on comparison to dyeings on split-leather.
Classification with a scale 1-5

Lightfastness

The lightfastness was tested on 2.0% chromside leather.
Xenotest 40h according to I.U.F. 402.
Classification is according to the blue-scale.

Migration into plasticized PVC (I.U.F. 442/132)

The migration rate was tested on 2.0% chromside leather.
The rate is based on the staining of the PVC.
Classification is according to the grey-scale ISO 105 A03.

Perspiration fastness (I.U.F. 426/132-133)

the perspiration fastness was tested without cationic fixatives.

The results are given in following order:

- change in leather colour - grey-scale ISO 105 A02
- staining of wool - grey-scale ISO 105 A03
- staining of cotton - grey-scale ISO 105 A03

Dyeing methods – overview

Dyeing methods of the illustrated leathers:

Full chrome side leather "Wet-Blue"

% is referring to the shaved weight

Washing	Water 40°C	300%	30 Min.
	Water 40°C	200%	
Neutralising	Sodium-Formate	0.3%	10 Min.
	Sodium-Bicarbonate	0.4%	30 Min.
Dyeing	Water 60°C	300%	
	DYCONIL Dye	X%	30 Min.
	DYCO-Licker LF	5%	30 Min.
	Formic acid	1%	30 Min.
Washing	Water 20°C	300%	10 Min.
